Software Engineer who took a B2B SaaS platform from architecture to production - owning database design, REST APIs, frontend, AI integrations, and CI/CD. Alongside this, I built an end-to-end machine learning pipeline for acoustic-emission research that parses raw sensor data, clusters it with K-Means, and detects anomalies in structural-testing signals. I am actively seeking a full-time software development position to apply technical expertise, contribute to collaborative projects, and continue developing skills in real-world environments.

Education

2022-2026 – B.Sc. in Software Engineering, Sami Shamoon College of Engineering. **GPA:** 92.

Work Experience

Software Engineer - Mind Artists Journey (2025 - 2026)

Led development of a production B2B SaaS platform for coaches and business owners, owning the system end-to-end: architecture, database schemas, REST APIs, frontend, AI integrations, and CI/CD.

Leadership

- Recruited and managed an offshore developer across time zones - scoping R&D tasks, reviewing PRs on GitHub, and coordinating release cadence.

AI & Backend

- Designed and shipped AI-powered lead engagement and nurturing systems, integrating OpenAI, Anthropic, and Gemini for content and transcript workflows, with personal memory-based automation for context retention.
- Built an embeddings-based RAG pipeline powering intelligent search, retrieval, and an in-product AI coach with OpenAI streaming responses.

Learning Management System

- Architected an LMS with a hierarchical content tree, automated complex enrollment policies, and a rule-based milestone engine with auto-generated certificates.
- Integrated Mux and YouTube for video playback and progress tracking, and Supabase Realtime for live session state and gamification.

Infrastructure & Reliability

- Built CI/CD pipelines with parallelized Playwright E2E tests; profiled artifact upload/download steps and removed bottlenecks, cutting total pipeline time from 40 to 12 minutes.
- Managed multi-environment deployments (production + preview) on Vercel and Supabase.

Skills

- **Languages & Frameworks:** TypeScript, Next.js, React, Python, C, C++, C#, Java, SQL
- **Infrastructure & Tools:** FastAPI, Supabase (Postgres, Auth, RLS, Realtime, Edge Functions), Vercel, Docker, Stripe, Mux, Redis, Playwright, GitHub (PRs & CI/CD), MongoDB, Cursor, Claude Code

Languages : **Hebrew** – Native | **English** – Fluent
